Meteorologist's View

Persistent rain and low cloud for much of the morning and into the afternoon will make conditions on the mountains not only difficult under foot, but will make navigation challenging. Wet weather gear is a must if spreading anytime out on the hills during Tuesday. Winds will also be gusty at times making it feel cold too.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sun 26 May 2024	10.6mm	10.6mm	10.8mm

Forecast for Wednesday 29 May 2024

Weather: A rather cloudy start on Wednesday, but the cloud will lift and break up a little during the morning with sunny spells and showers soon developing. These will prove locally heavy and potentially thundery during the afternoon. Showers will ease from the west during the evening.

Maximum wind: Westerly means 15mph, gusting to 20-25mph near showers

Chance of cloud-free hill tops above 600m: 30% rising to 70% from late morning.

Low cloud and visibility: Low cloud and cloud banks on windward slopes with bases from 500m will make visibilities across summits poor initially. However as the cloud lifts and breaks up, visibilities will improve offering good visibility in between showers with excellent air clarity but temporarily moderate during the heavier showers.

Temperature: **Valleys:** Plus 19 Celsius.
At 600m: Plus 10 Celsius.
Freezing level: Well above the summits.
